

Project **WILD** Aquatic

**Project WILD Aquatic K-12 Curriculum
and Activity Guide Student Pages**

Principal Sponsors

Project WILD is administered by the Council for Environmental Education and is cosponsored by the Western Association of Fish and Wildlife Agencies.

The views and conclusions contained in this document are those of the authors and should not be interpreted as representing the opinions or policies of the U.S. Government. Mention of trade names or commercial products does not constitute their endorsement by the U.S. Government.

Cover photos of large-mouth bass and swordfish courtesy of Bass Pro Shops.

Awards and Recognition

Project WILD, its sponsors, and many of its participants—including students and educators—have received a variety of awards and recognition. Project WILD was honored at the White House in 1991 as one of the first recipients of a Gold Medal for Education and Communications in the President's Environment and Conservation Challenge Award program. This award was bestowed "for excellence in developing innovative solutions to the nation's environmental challenges." Project WILD has also received the Conservation Education Award from The Wildlife Society. These materials have been endorsed by the National Council for the Social Studies and are consistent with recommendations of the National Science Teachers Association.

These materials have been developed through a cooperative agreement with the U.S. Fish and Wildlife Service. By this agreement, these materials can be made available to state fish and wildlife agencies through the U.S. Fish and Wildlife Service. Funding for the development of these materials has been provided with support from monies made possible through the Wallop-Breaux Amendment to the Sport Fish Restoration Act. This federal legislation provides support for aquatic resources education to increase public understanding of, and responsibility toward, the nation's water resources and aquatic life forms.

Diagram B

Pattern for Life-Size Whale

List of Materials

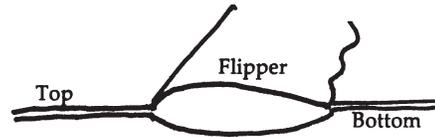

1. Black plastic, 4 mil, 24 feet (7.2 m) by 100 feet (30 m)
2. Clear/White plastic, 4 mil, 16 feet by 100 feet (4.8 m by 30 m)
3. Clear 2 inch (5 cm) wide plastic tape—20 rolls

Tools Needed

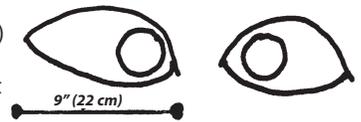

1. Tape measures, 100 feet (30 m) and 26 feet (8 m)
2. Scissors to cut the plastic and tape
3. High-speed fan

Steps

1. Lay plastic on 10-foot (1 m) grid.
2. Cut out all parts; cut out some of the flippers or tail flukes from the cutout sections of the whale body.
3. Tape together the flippers and tail flukes (remember the right and left sides for both), and tape together the top dorsal fin. Do not tape the body (straight side) connection.
4. After taping the "fins," turn inside out, placing the tape seam inside.
5. Tape together the cutout sections of the whale's top section as indicated on the plan.
6. Tape together the cutout sections of the whale's bottom section as indicated on the plan.
7. Place the tail flukes and flippers on the bottom section of the whale at their locations.

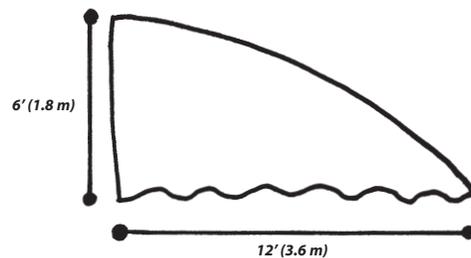

8. Start taping the top section to the bottom section, using the tail flukes as side walls where they connect to the body; start at the tail section on each side and work toward the mouth area.
9. Do not tape the end of the tail section together.
10. Mouth area—the clear/white plastic will have to be pleated to meet the side area taping; start in the center of the mouth and work out the sides—about 2 inches (5 m) for each pleat.
11. Once the whale is fully taped, place the fan in the tail opening and inflate the whale. One person will go into the whale to the nose section and pull the nose section out through the tail opening, inverting the seams and letting the flippers and tail flukes to the outside.
12. Mount the top dorsal fin on the black top section in the center of the tail section about 58 feet (17.4 m) from the front of the whale.
13. Place the 9-inch (22 cm) eye drawings on the top section, just in front of the flippers.
14. Inflate the model with the high-speed fan; step back and give it room.

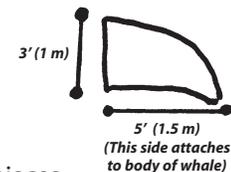

Tail Flukes

2 black and 2 clear/white pieces
(Will create right and left tail sections)

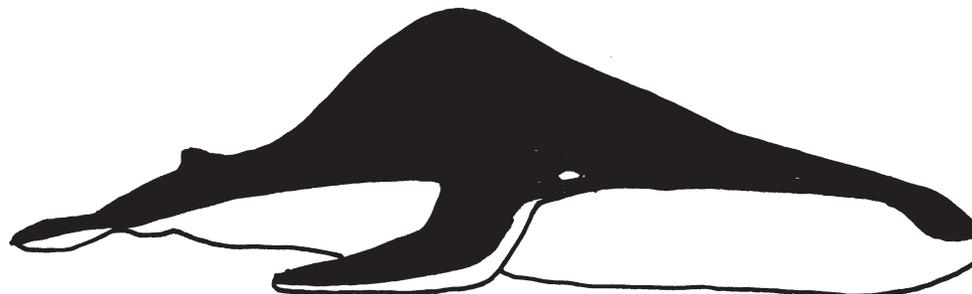

Top Dorsal Fin

2 black pieces

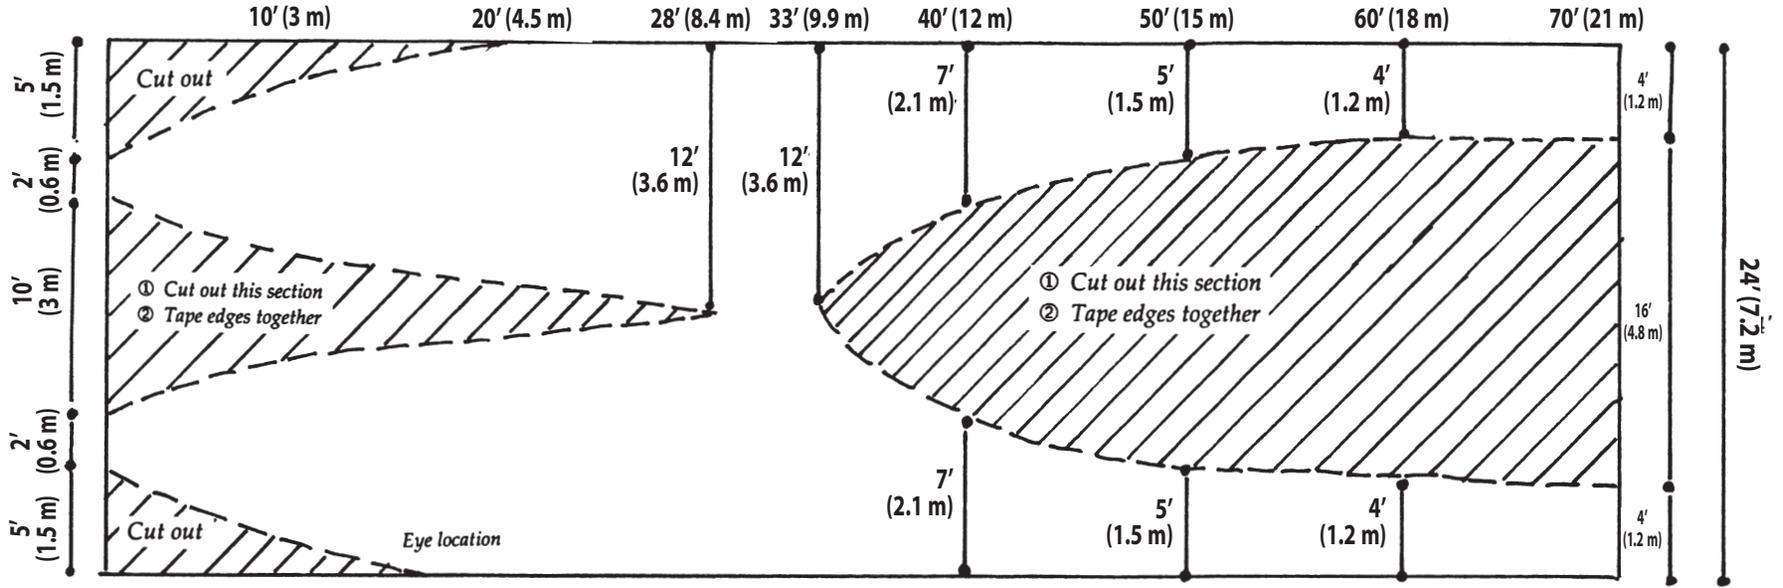

Flippers

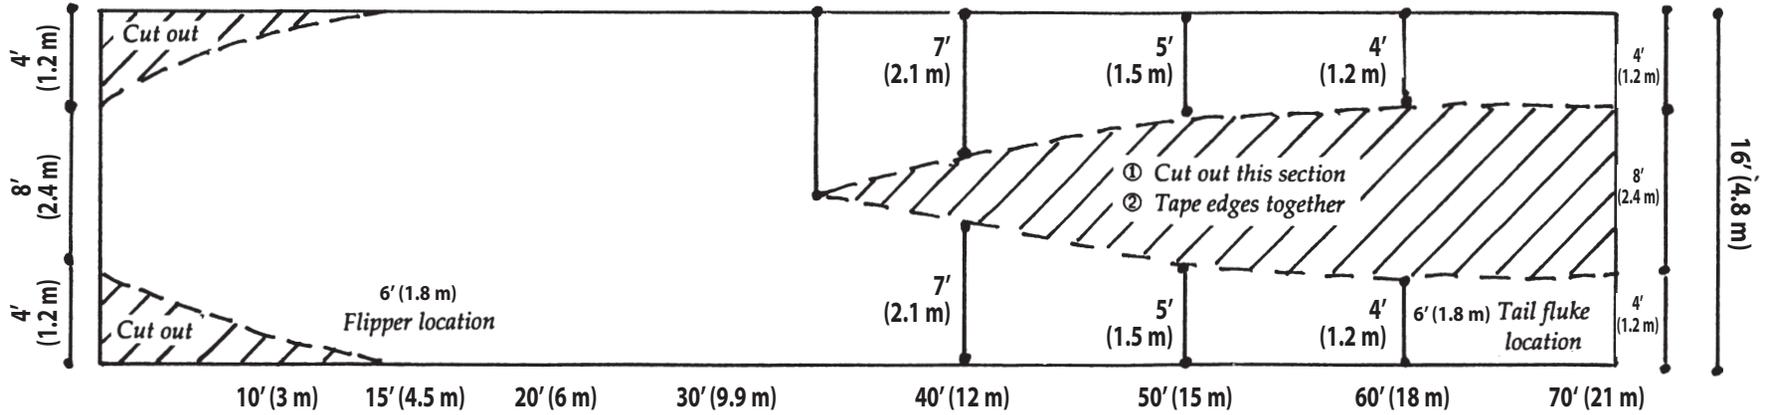

2 black and clear/white pieces
(Will create right and left flipper sections)

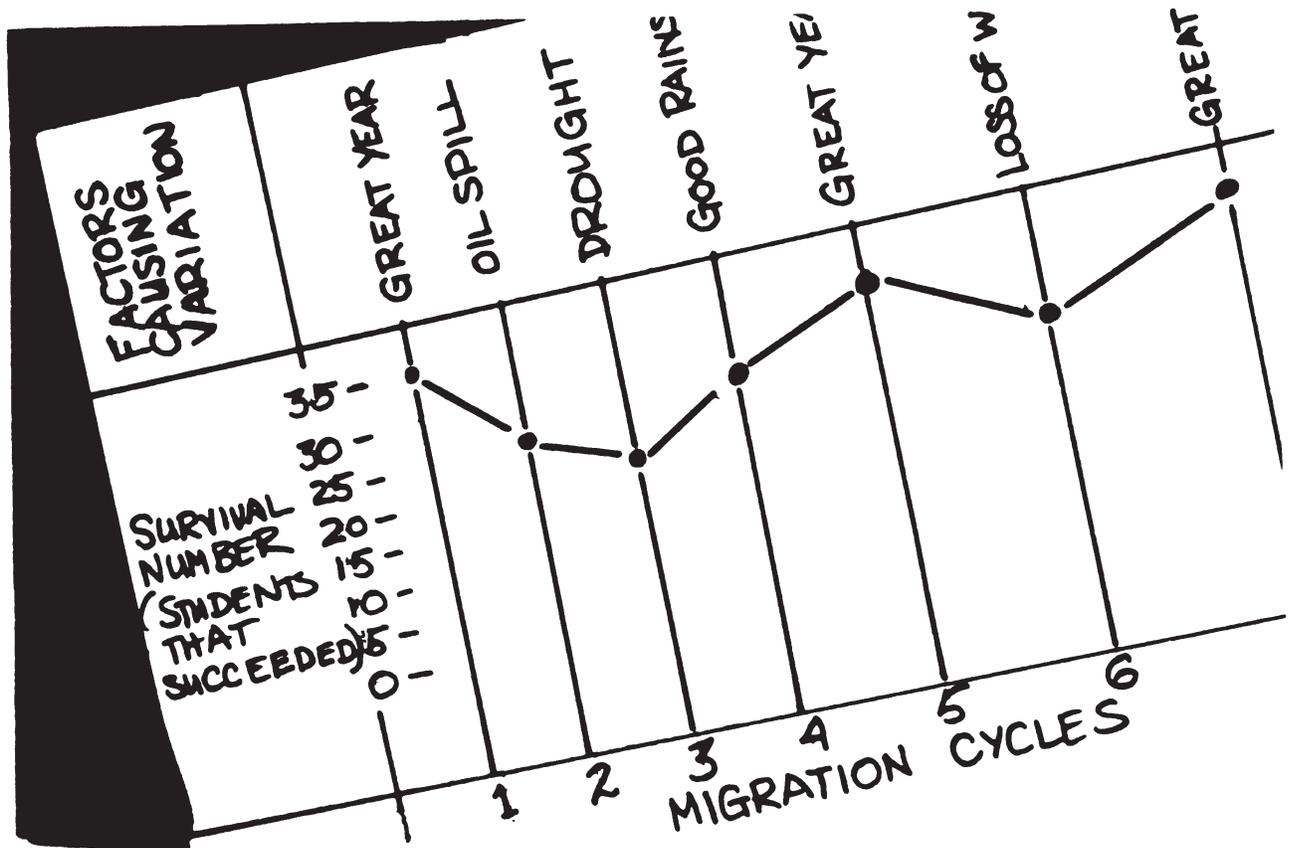

Top Section 24' x 100' (7.2 m x 30 m) 4 mil black plastic

Tape together Top Section to Bottom Section
(Start at the tail)

Bottom Section 16' x 100' (4.8 m x 30 m) 4 mil clear/white plastic

The Water Cycle

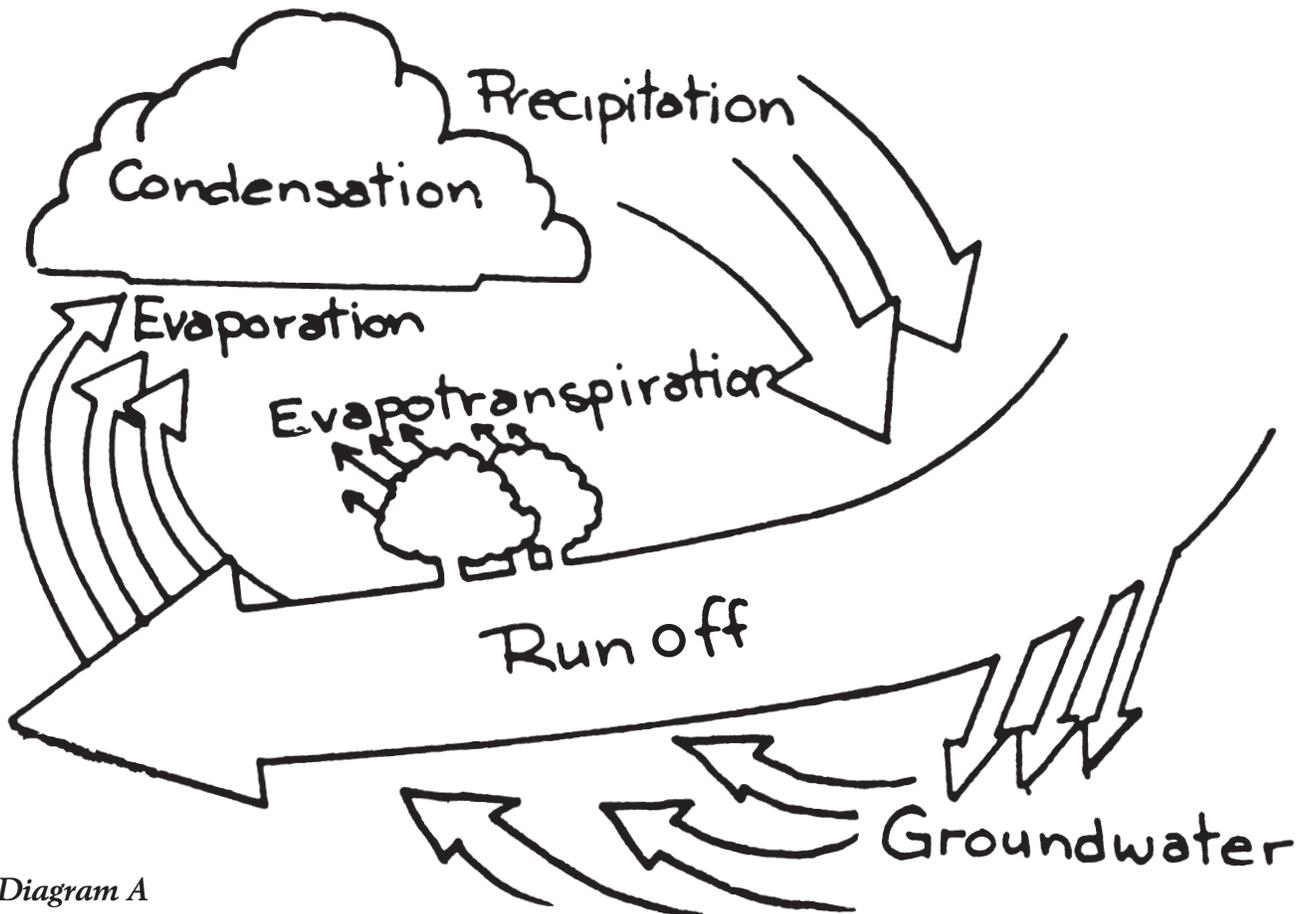

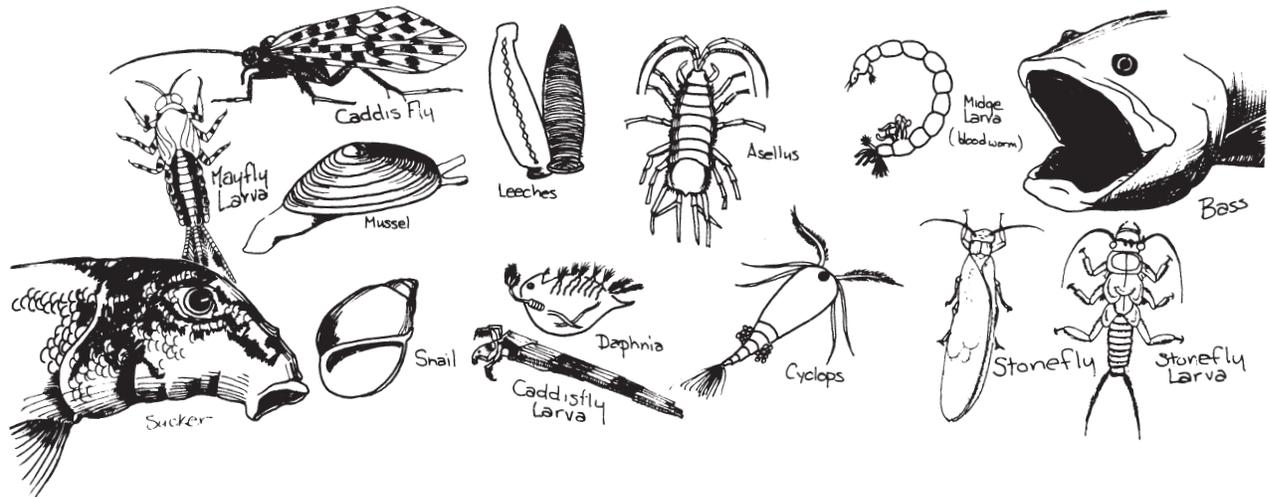

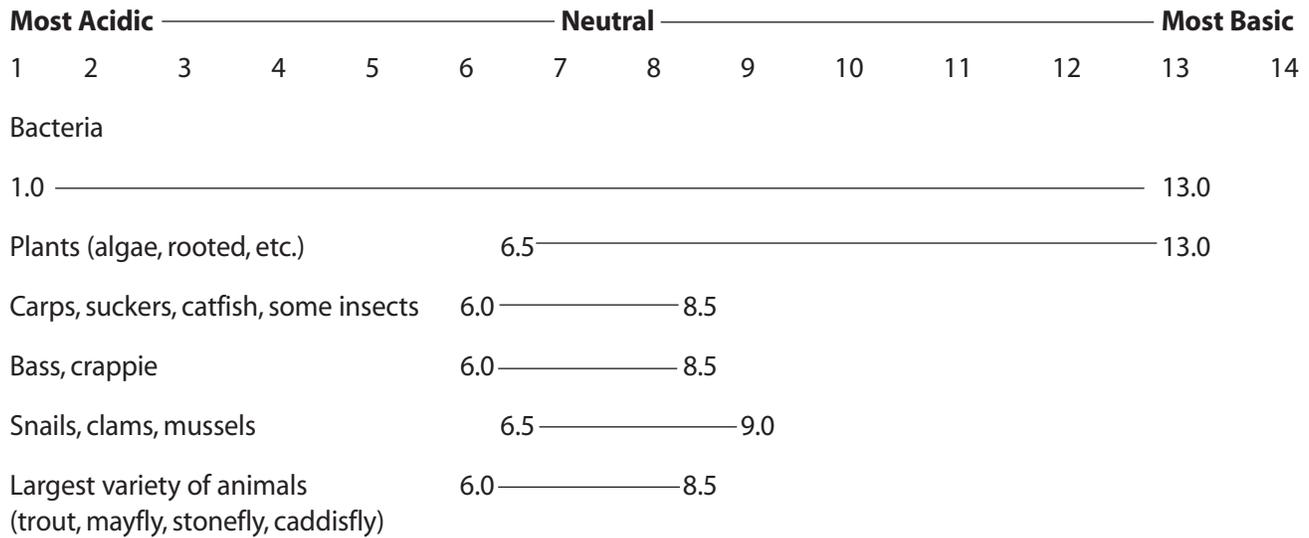

Diagram A

pH Ranges That Support Aquatic Life

Temperature Ranges (Approximate) Required for Certain Organisms

Temperature

Greater than 68 °F (20 °C) = Warm water	Much plant life, many fish diseases Most bass, crappie, bluegill, carp, catfish, caddisfly, dragonfly, mayfly, mussels.
55 – 68 °F (12.8 – 20 °C) = Cool water	Plant life, some fish diseases Salmon, trout, stonefly, mayfly, caddisfly, water beetles, small-mouth and rock bass, various minnows and darters, mussels
Less than 55 °F (12.8 °C) = Cold water	Trout, caddisfly, stonefly, mayfly, various minnows, darters, sculpins

Dissolved Oxygen (DO) Requirements for Native Fish and Other Aquatic Life (DO in parts per million [ppm])

(Below 68 °F)

(Above 68 °F)

Cold-water organisms including salmon and trout

Warm-water organisms including fish such as bass, crappie, catfish, and carp

COUNTRY BACKGROUND INFORMATION**Pargimo**

- Developing country.
- Some coastal land development.
- Coastal village income is based on fishing.
- Borders the Republic of United Peoples (RUP).
- Sea turtle and sea turtle eggs are a common food.
- Sea turtles, sea turtles eggs, and products made from sea turtles have been traded internationally for centuries and were an important part of the country's and individuals' incomes.
- Sea turtles migrate from the RUP coast to the Pargimo coast to spend their nonbreeding season.
- Some of the turtles migrate from the south of Pargimo to the north where they lay their eggs on the furthest northeast shores.
- A member of CITES, but lacking financial resources for enforcement.
- Ocean pollution by industrial sources is a concern.

The Republic of United Peoples (RUP)

- Developed country.
- A very active member of CITES with active enforcement.
- Borders Pargimo.
- Sea turtles migrate from the coast of Pargimo to the coast of RUP to lay eggs.
- Coastal lobster and shrimp fishery is a large source of income for many coastal communities.
- Extensive coastal land development.

Chumas

- Developed country.
- Landlocked, therefore, no sea turtles.
- Nonenforcing member of CITES.
- Culture encourages the use of sea turtles and sea turtle products as a food source, as a health aid, and for ceremonial uses.
- Black market for sea turtle products that goes unchecked by the government.

Scenario Cards

Country: Chumas

Sea turtle jewelry dealer

Because you know how valuable sea turtle jewelry is all over the world, you buy as much as you can, even though it is prohibited.

Wants:

Turtles
Money

Country: Chumas

Restaurant owner

The people of your community have been eating sea turtle eggs and sea turtles for thousands of years as a delicacy. You buy as many eggs and turtles as you can.

Wants:

Turtles
Turtle eggs
Money

Country: Chumas

Turtle trader

Middle class. You buy sea turtles from collectors in Pargimo to sell to companies in Chumas that make medicine, ceremonial products, and traditional food. Although your work has been respected and needed, it has now become illegal.

Wants:

Job

Country: Chumas

Ceremonial sea turtle buyer

You buy products made from sea turtles to sell for ceremonial uses. People in your community have been using sea turtle products for generations. Without them, the ceremonies would fail and harm would fall on the village.

Wants:

Turtles

Country: Chumas

Turtle egg trader

Middle class. You buy sea turtle eggs from collectors in Pargimo to sell to companies in Chumas that make medicine and traditional food. Although your work has been respected and needed, it has now become illegal.

Wants:

Job

Country: Pargimo

Government bureaucrat

You are interested in the agency operating efficiently. You have received a request for a special land development permit, but because of the new CITES regulations, must wait for judicial orders before you can fulfill this request.

Wants:

Judicial order (requiring beach habitat to be set aside) for coastal building permits

<p>Country: Pargimo</p> <p>Landowner You have extensive coastal land holdings but are cash poor and need money to rejuvenate other businesses. You believe wild animals are property of landowner. You want poachers arrested.</p> <p><i>Wants:</i> Capital investment funds</p>	<p>Country: Pargimo</p> <p>Judge You are frustrated by a lack of professional recognition for community efforts. You would like to further CITES by requiring developers to set aside beach natural areas for turtle habitat when applying for building permits. You hope that eco-tourism will develop. You believe wildlife belongs to the public for protection.</p> <p><i>Wants:</i> Professional recognition</p>
<p>Country: Pargimo</p> <p>Collector of turtles (poacher) You poach turtles from beach and ocean to sell to traders in Chumas in order to support large family. You believe wildlife should be available for public taking, but would prefer a legal job.</p> <p><i>Wants:</i> Job</p>	<p>Country: Pargimo</p> <p>Collector of turtle eggs (poacher) You poach turtle eggs from beach to sell to traders in Chumas in order to support large family. You believe wildlife should be available for public taking, but would prefer a legal job.</p> <p><i>Wants:</i> Job</p>
<p>Country: Pargimo</p> <p>Wildlife biologist and manager You are frustrated by poaching of turtles and by news of potential beach development. You would like to see the beaches protected and have a way to replenish the population of baby turtles. You believe wildlife belongs to the public.</p> <p><i>Wants:</i> Beach in natural condition Compliance by poacher Turtle eggs</p>	<p>Country: Pargimo</p> <p>Law officer You are required to arrest poachers and traders of turtles or turtle products. Your position is difficult because you personally know the families that are trying to subsist through this illegal activity. You believe wildlife should be available for public taking, and you wish you did not have to arrest poachers.</p> <p><i>Wants:</i> Compliance by poacher Compliance by trader Compliance by ceremonial sea turtle buyer</p>

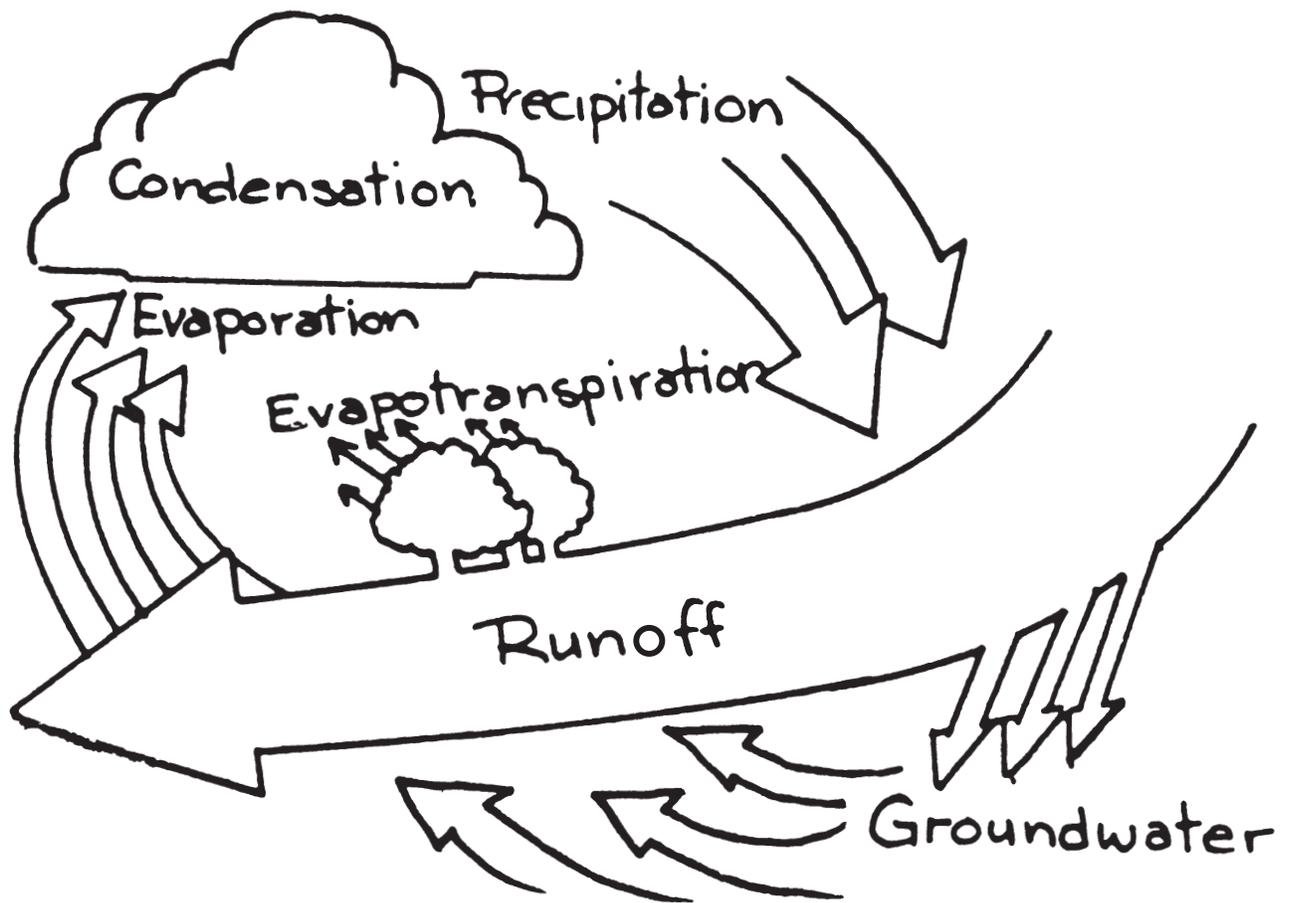

Hases Cards

Initially hand these cards out to the students representing the character typed in bold on the card. Most characters will get several cards. These cards will be traded to other characters during the activity. (Note trading conditions in *italics*.)

Country: Chumas Sea turtle jewelry dealer Jewelry <i>May not be sold until receives turtles.</i>	Country: Chumas Restaurant owner Food <i>May not be sold until receives turtles.</i>

Diagram A

Round Puddles

$$\text{Area} = \pi r^2$$

($\pi = 3.14$; it is a mathematical constant)

$$A = 3.14 \times r \times r =$$

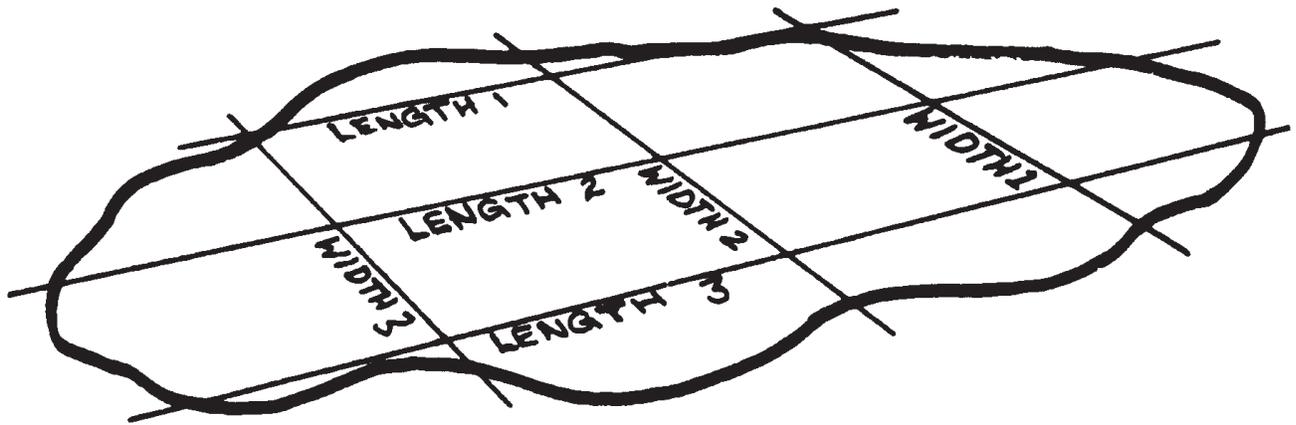

Diagram B

Area = Length (average) \times Width (average)

$$\text{Average Length (La)} = \frac{L1 + L2 + L3}{3}$$

(3 is the number of measurements)

$$\text{Average Width (Wa)} = \frac{W1 + W2 + W3}{3}$$

$$A = La \times Wa$$

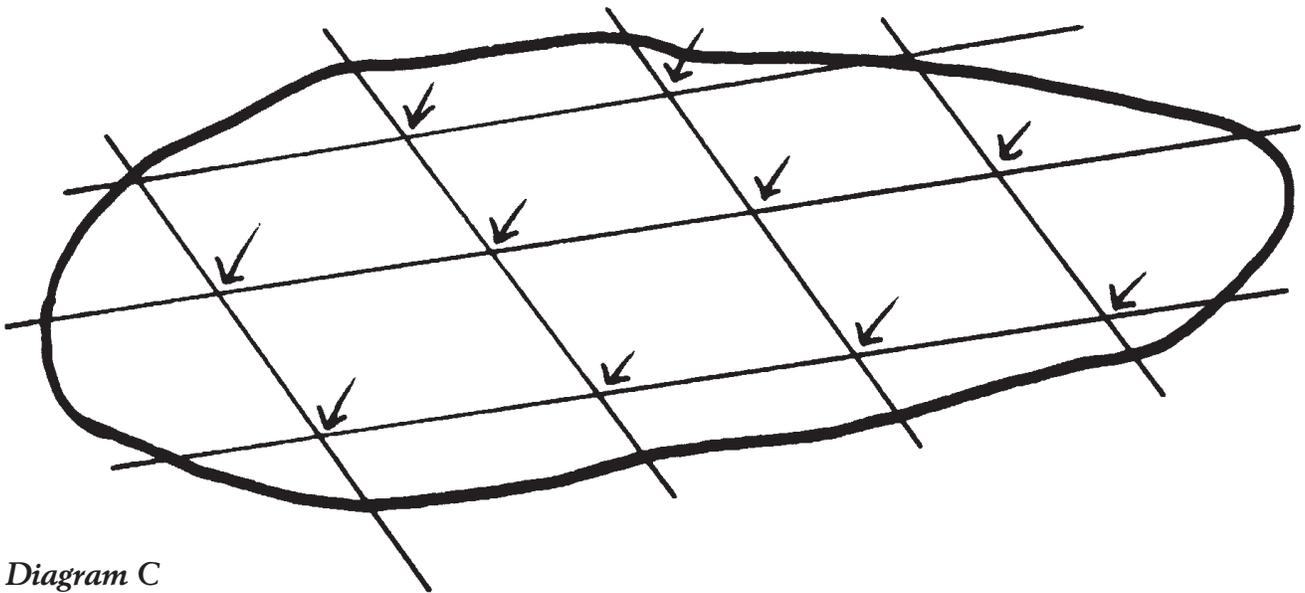

Diagram C

Use the following formula for average depth (D_a). There are 10 measurements of depth shown in the example above.

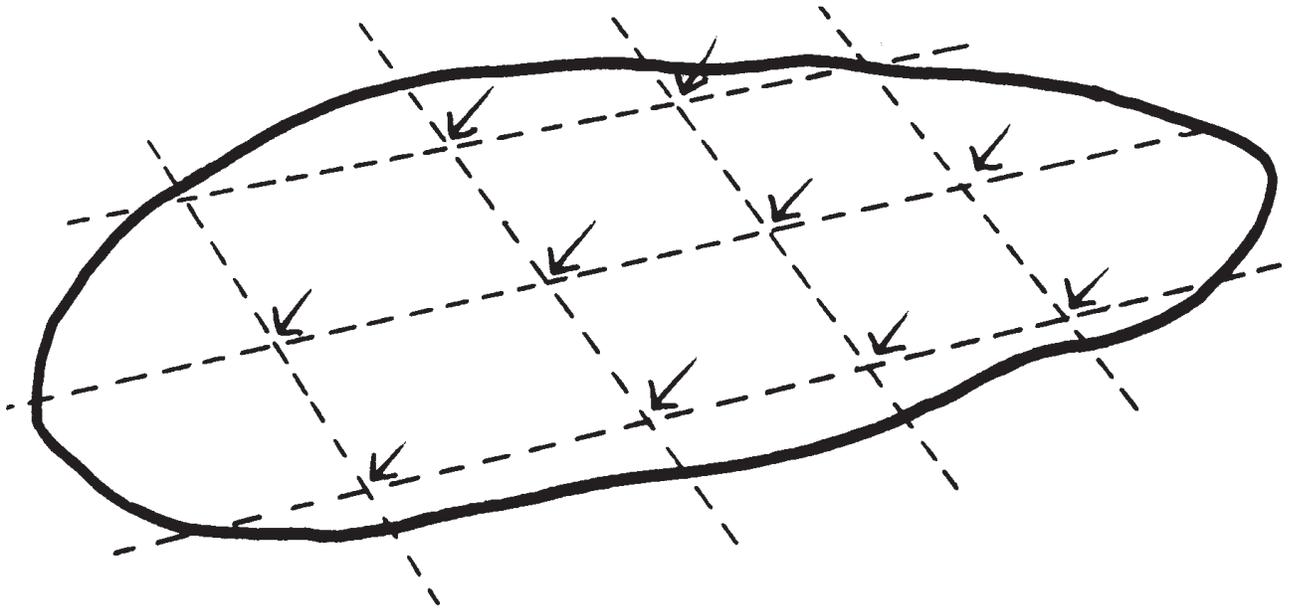

Diagram D

Da (average) =

$$\frac{D1+D2+D3+D4+D5+D6+D7+D8+D9+D10}{10 \text{ (the number of measurements)}}$$

Now the volume can be calculated:

$$\text{Volume} = L_a \times W_a \times D_a$$

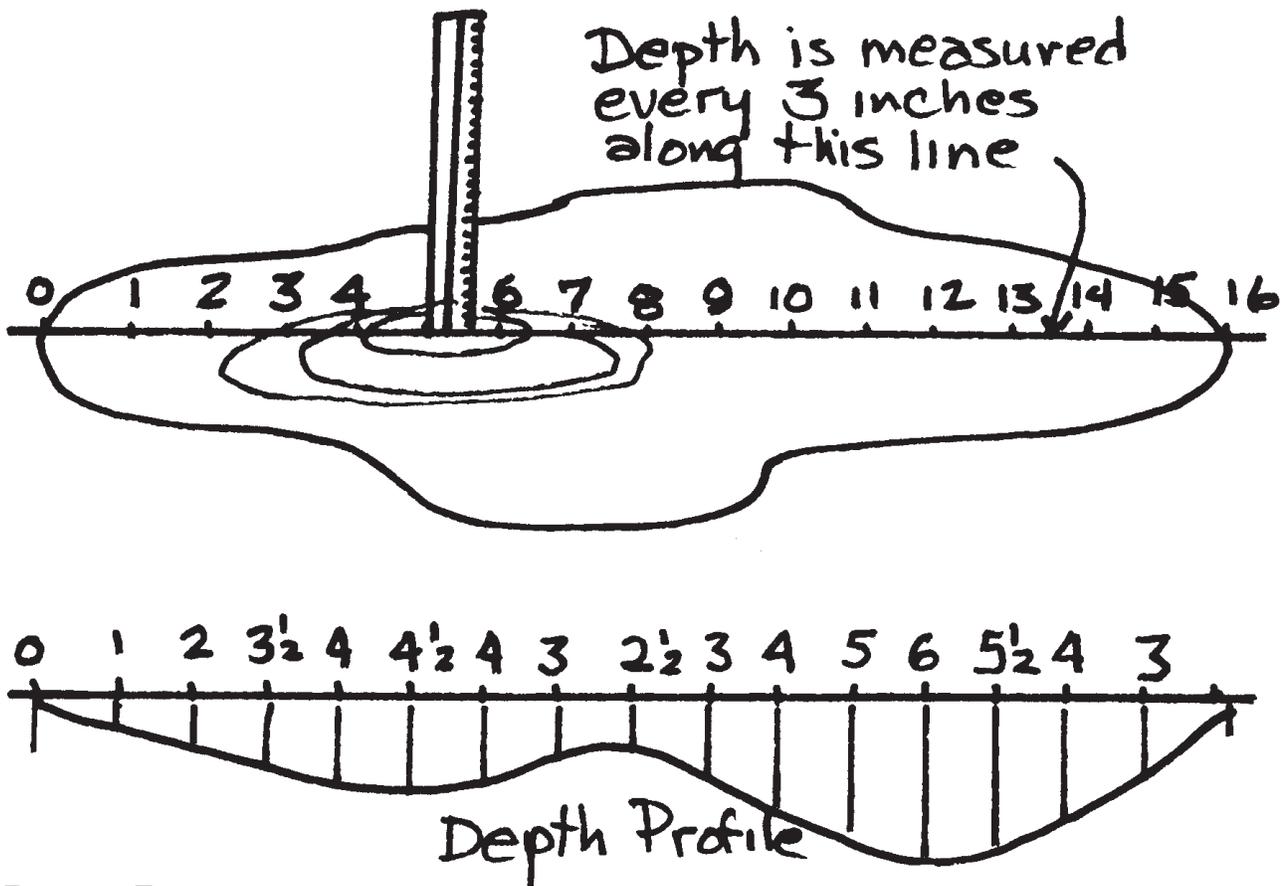

Diagram E

Water on Earth

Source	Percentage of Total Water (%)
Oceans	96.5400
Ground water	
Saline/brackish ground water	0.9300
Fresh ground water	0.7600

Student Page

Fish 1 (Chinook): These fish are considered to be the most abundant and valued fish species for catching. They migrate the entire length of the river and are the largest in individual size of all salmon.

Fish 2 (Coho): These fish are second to Fish 1 in popularity and economic value. They migrate only up to the lower middle part of the river system.

Fish 3 (Chum): Never popular, this fish species does not bite a hook well, is found only near the mouth of the river, and is usually caught with nets.

Fish 4 (Sockeye): Smallest fish in the group, they migrate to the uppermost part of the river. They require lakes for successful spawning and rearing. This fish species does not bite a hook well and is taken mostly with nets.

Fish 5 (Steelhead): These fish migrate throughout the river system. Habitat requirements are more restrictive than others.

The data below are taken from actual fish catches. The accompanying historical data provide an overview of human activity in the river, plus developing regulatory and management efforts over time.

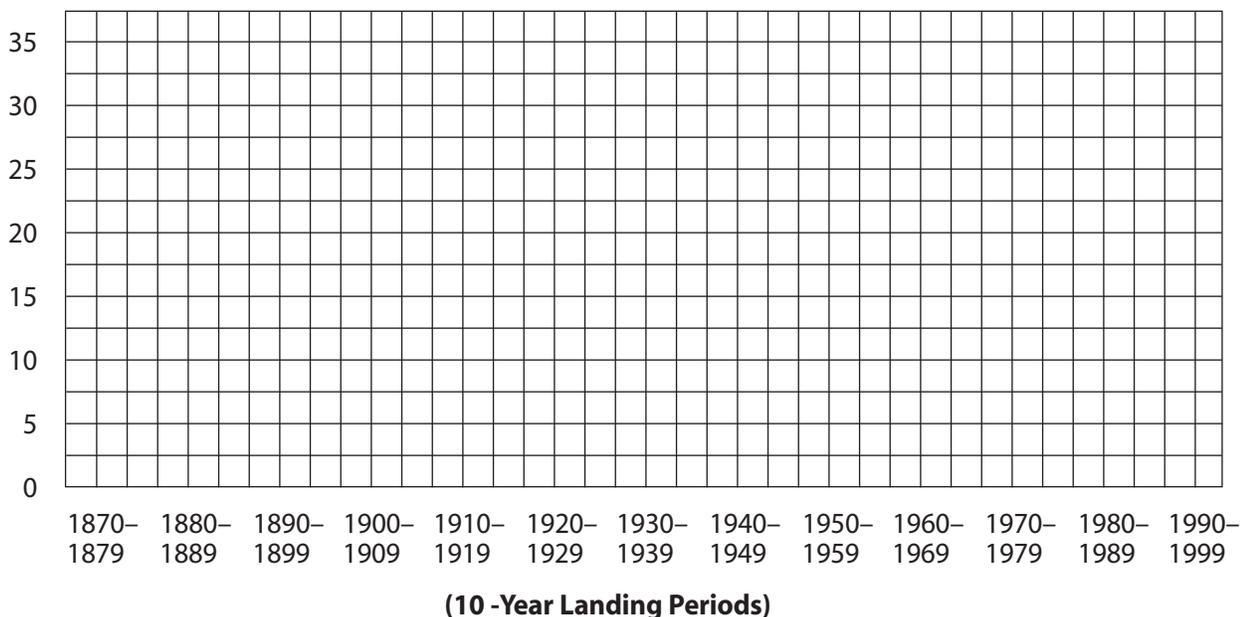

Fish Caught on the Columbia River*

Years	Fish 1	Fish 2	Fish 3	Fish 4	Fish 5
1870–79	22.7	—	—	—	—
1880–89	33.1	—	—	—	—

Fish Caught on the Columbia River

Adapted from an activity in "Water, Water Everywhere," Corvallis, OR; Oregon State University Extension Sea Grant Program, 1985. Used with permission.

Historical Data: Fish Caught on the Columbia River

1866	Opening of first fish cannery on the Columbia River.	1930–1950s	Extensive logging in lowest part of river systems.
1869–1883	Canning of Fish 1 jumped from 100,000 to 630,000 cases.	1940–1950	Four new dams built on the river between existing dams.
1877–1878	First efforts to regulate fisheries by state. Enforcement was limited but control of amount and type of fishing gear helped.	1950s	Six dams built on the major tributary of the river. Government launches a massive hatchery program for Fish 1, 2, and 5.
1880–1889	43 million pounds of Fish 1 taken from river by commercial fishers.	1953	Another dam built on main river.
After 1883	Canneries begin to use other species of fish (2, 3, 4, 5).	1957	Another dam built.
1900–1909	30 million pounds of all fish taken.	1950–1960s	Ocean harvest rather than river harvest of Fish 1 and 2, increases greatly.
1915–1920	40–44 million pounds of fish taken as World War I inspired intensive use.	1968	Another dam built.
1920	Approximately 1,000 commercial trollers operating in the Pacific Ocean. At least that many boats in the river with gill nets, seines, and traps.	1968–1973	Extreme nitrogen supersaturation in river from dam spill of runoff water. Many small fish killed.
1933–1938	Construction of first dam on lower part of the river.	1960–1980	Fish hatchery techniques greatly improved on Fish 1, 2, and 5.
After 1935	Only gill-netters allowed on the river. All other commercial fishing techniques banned.	1970s	Commercial use of Fish 5 is banned.
1941	Second dam built in upper river. No fish ladders installed.	1980s	Intensive regulation of ocean fishing on Fish 1 and 2.
		1990s	One of the dams is removed.

Role-Playing Cards

<p>A. G. “Rick” Ulture: a representative of the local farmers’ coalition interested in the dam’s potential for protecting crops from floods, as well as in its ability to provide water for irrigation.</p>	<p>Sam Slalom: an avid water skier who sees the new lake as a real boon to skiing interests.</p>
<p>Lotta Power: a lobbyist for the municipal electrical power company interested in developing the dam.</p>	<p>Velma or Virgil Vigil: a local representative of the Gray Panthers, a group of retired people who are concerned about any rise in power bills.</p>
<p>Rob or Marta Kanu: kayaker concerned with the loss of the whitewater stretch for canoeing and kayaking.</p>	<p>“Boater” Cartop: an older fisherperson who enjoys throwing the boat on the top of the car and putting in at the closest float spot—especially lakes!</p>
<p>Sam N. Fish: a local sporting goods storeowner and avid fisherperson concerned with the loss of migration routes for the fish on the river.</p>	<p>Marshal or May Flyfisher: a long-time resident who champions the purity of fly-fishing and insists on pristine habitat, noting the necessity of whitewater riffles.</p>
<p>Dan D. Lion: the president of the “Save Our Native Plants and Wild Animals” organization.</p>	<p>Col. “Bull” Winkle: the president of “More Moose Now,” who believes that the lake will provide more moose habitat.</p>
<p>Pat “Pottery” Brusher: an archeology professor from the local university who has done extensive research on the archeological sites of American Indian fishing camps along the river.</p>	<p>Lap Larson: the president of W.O.W. (Watch Our Waves).</p>
<p>Lynn Dripper: the director of the municipal water quality authority responsible for providing quality drinking water for the city. Believes in the dam’s potential for providing a reservoir of high-quality water for the long, hot summers.</p>	<p>Cy or Sy N. Tist: a respected biologist who is prepared to testify about potential effects on wildlife from the building of the dam.</p>
<p>H. M. Owner: a representative of all homeowners in the river valley below the dam who would like to see more flood control.</p>	<p>O. L. Slick: a salesperson for motor boats, water skis, and other recreational equipment.</p>
<p>Bobbie Lawkeeper: the local Rocksburg sheriff concerned about maintaining police protection, peace, health, and safety with only a one-person staff as the sole legal authority in the region.</p>	<p>Forest or Park Site: a trained forester who has worked in the woods in the area for more than 50 years.</p>
<p>T. M. Burr: the owner of a lumber company whose land would be inundated by the reservoir.</p>	<p>Running Waters: a tribal leader who is concerned about loss of native heritage from flooding the region for the dam.</p>
<p>I. M. Floaten: an owner of a whitewater rafting company who uses the river for commercial rafting. Concerned about loss of the “best 7 miles of the river,” I. M. argues that the lake would submerge the best rapids.</p>	<p>E. Conomy: a local businessperson who is concerned about the long-range business potential of the area.</p>
<p>“Sky” Soarer: the president of the local bird club who has organized eagle-watching trips to the river every winter for the past 15 years.</p>	<p>C. D. Minium: a wealthy land developer who has architects working on designs for lakeside condominiums and resort homes.</p>

Sample Observations Chart

Each group of students selects one difficulty level for each water type by placing a check in the appropriate box in its column. They may record additional observations in the boxes as well.

Difficulty Levels	Group 1	Group 2	Group 3	Group 4
Clean Water				
Easy to blow				
Less easy to blow				
Hard to blow				
Sand in Water				
Easy to blow				
Less easy to blow				
Hard to blow				
Silt in Water				
Easy to blow				
Less easy to blow				
Hard to blow
